

IDEATION PHASE

Brainstorm & Idea Prioritization Template

Project Start Date	24/09/2026
Project ID / Team ID	SWTID-2026-8694
Project Name	AI BLOGNEST API

Maximum Marks: 4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement: Develop an AI-powered BlogNest REST API that provides a structured backend for blog management, including user access, blog creation and management, database operations, and API-based interaction. The system should support reliable request handling, validation, authentication-related functionality, and clear JSON responses.

Step-2: Brainstorm, Idea Listing and Grouping

Category	Ideas	Purpose
API & Backend	REST API with Node.js and Express.js	Handle client requests and API routes
Database	MongoDB with Mongoose	Store users and blog-related data
Authentication	Login and token-based access	Control access to protected API operations
Blog Management	Create, read, update and delete blogs	Provide core blog CRUD functionality
AI Features	AI-assisted blog/content support	Enhance the blogging experience
Validation	Request validation and error handling	Improve reliability and data quality
Testing	Postman / API testing	Verify endpoints and responses

Step-3: Idea Prioritization

Priority	Idea / Feature	Reason for Priority	Implementation Focus
1	REST API & CRUD	Core functionality of the project	Routes, controllers and CRUD operations
2	MongoDB Database	Required for persistent data storage	Mongoose schemas and database connection
3	Authentication	Provides controlled user access	Login and protected operations
4	Validation & Error Handling	Improves API reliability	Validate requests and return useful errors
5	AI Blog Support	Adds the AI-focused capability	AI-assisted content functionality
6	API Testing	Confirms that features work correctly	Postman/Thunder Client endpoint testing
