

Project Design Phase-II

Data Flow Diagram & User Stories

Date: 22 September 2026

Team ID: SWTID-2026-8694

Project Name: AI BLOGNEST API

Maximum Marks: 4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD depicts the system requirements graphically. It shows how data enters and leaves the system, what processes change the information, and where data is stored.

Example: (Simplified)

Client / User	API Request	AI BLOGNEST API
	→	Authentication & Validation
	→	Blog CRUD Processing
	→	MongoDB Database
JSON Response	←	Success / Error Response

Data Flow: Client/Postman → Express.js Routes → Validation & Business Logic → Mongoose → MongoDB → JSON Response.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Developer / API User	Authentication	USN-1	As a user, I can register and log into the API using valid credentials.	Valid credentials are accepted and an authentication response is returned.	High	Sprint-1
Developer / API User	Database	USN-2	As a user, I can store and retrieve blog data from MongoDB.	Blog data is saved and can be retrieved successfully.	High	Sprint-1
Blog User	Blog Management	USN-3	As a user, I can create a new blog through the API.	Valid blog data is accepted and a new blog record is created.	High	Sprint-1
Blog User	Blog Management	USN-4	As a user, I can view blog posts using the GET API.	The API returns the requested blog data in JSON format.	High	Sprint-1
Blog User	Blog Management	USN-5	As a user, I can update an existing blog using the PUT API.	The selected blog is updated and the updated data is returned.	High	Sprint-2
Blog User	Blog Management	USN-6	As a user, I can delete an existing blog using the DELETE API.	The selected blog is deleted and a success response is returned.	Medium	Sprint-2
API User	Validation & Errors	USN-7	As a user, I receive clear validation and error responses for invalid requests.	Invalid input is rejected with an appropriate status and message.	High	Sprint-2
Content Creator	AI Assistance	USN-8	As a content creator, I can use AI-assisted support for blog/content creation.	The requested content-support function returns a usable response.	Medium	Sprint-3
Developer / Tester	API Testing	USN-9	As a tester, I can test all API endpoints using Postman or Thunder Client.	Requests return the expected status codes and response data.	High	Sprint-3
