

Project Executable Files

Project Name: AI Blog Nest API

Team ID: To be filled

Step 1: Submission Checklist

S.No	Item to Submit	Submitted
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes
3	package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes / NA as applicable
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA – Local API
7	APK / Executable binary	NA – Web/API project
8	Dockerfile / Containerization config	NA
9	Test files and test results	Yes
10	Demo video / walkthrough	To be provided if required

Step 2: File / Folder Structure

AI Blog Nest API project structure includes the Node.js API source, configuration, controllers, middleware, models, routes, services, application/server files, dependency configuration, environment configuration, README, and API test/collection files.

Folder / File	Purpose
src/	Main backend source code
src/config/	Configuration and database connection
src/controllers/	API request controllers
src/middleware/	Authentication / middleware logic
src/models/	Database models
src/routes/	API route definitions
src/services/	AI / service integration logic
src/app.js	Application configuration
src/server.js	Server startup
.env / .env.example	Environment configuration
.gitignore	Files excluded from repository
package.json	Project dependencies and scripts
README.md	Project setup and usage instructions
Thunder Client / API collection	API testing requests

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not hosted – Local API: http://127.0.0.1:5000
Login Credentials (Demo)	Use the demo credentials configured for the local project; do not upload real passwords.
Platform / Hosting Provider	Local Node.js / Express server
Repository Link	https://github.com/Ravi-teja-777/AI-ML-and-GEN-AI-Track-Project-Template
Demo Video Link	To be provided if required

Step 4: Run Instructions

1. Download or clone the project repository.
2. Open the project folder in VS Code.
3. Install Node.js dependencies using: npm install
4. Create the environment configuration file and add the required database / AI API configuration.
5. Start the development server using: npm run dev
6. Confirm that the server is running on port 5000.
7. Use Thunder Client / Postman to test the API endpoints.
8. Local API base URL: http://127.0.0.1:5000

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Project is configured for local execution.	Run the Node.js server locally on port 5000.
2	AI blog generation response may take longer than normal API response.	Wait for the AI service response; performance can vary by API/service availability.
3	Environment variables are required for database / AI service configuration.	Ensure the required .env configuration is present before running the project.

Note: Items marked 'To be provided' should be replaced with the actual link/details before final submission.
